Foodie
Final Project

Vinutha Karanth

Table of Contents

Basic Features

Advanced Features

1. Splash Screen

SplashActivity.java

```
SplashActivity
1  package com.connect.foodies.foodies.home;
2
3  import ...
9
10
11 public class SplashActivity extends AppCompatActivity{
12
13     private final int SPLASH_DISPLAY_LENGTH = 3000;
14
15     public void onCreate(Bundle icicle) {
16         super.onCreate(icicle);
17         setContentView(R.layout.activity_splash_screen);
18
19         /* New Handler to start the Menu-Activity
20          * and close this Splash-Screen after some seconds.*/
21         new Handler().postDelayed(() -> {
24                 /* Create an Intent that will start the Menu-Activity. */
25                 Intent mainIntent = new Intent(SplashActivity.this,HomeActivity.class);
26                 SplashActivity.this.startActivity(mainIntent);
27                 SplashActivity.this.finish();
28         }, SPLASH_DISPLAY_LENGTH);
30     }
```

2. Navigation Drawer

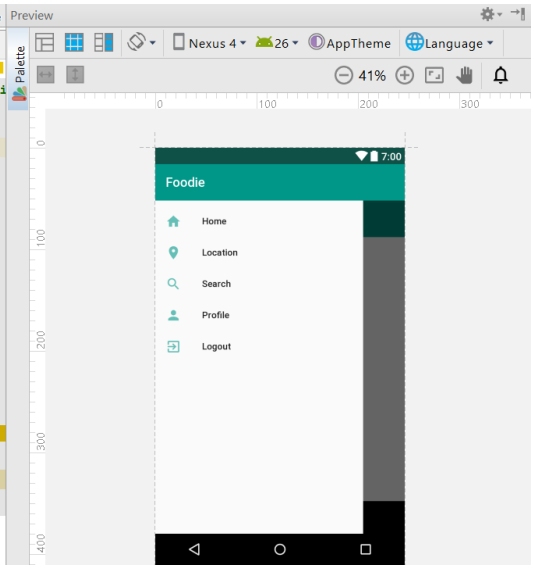
HomeFragment.java | HomeActivity.java | activity_home.xml

```
android.support.v4.widget.DrawerLayout
<?xml version="1.0" encoding="utf-8"?>
<android.support.v4.widget.DrawerLayout xmlns:android="http://schemas.androi
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:id="@+id/drawer_layout"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:fitsSystemWindows="true"
    tools:openDrawer="start">

    <include
        layout="@layout/layout_home"
        android:layout_width="match_parent"
        android:layout_height="match_parent" />

    <android.support.design.widget.NavigationView
        android:layout_width="match_parent"
        android:layout_height="match_parent"
        android:id="@+id/nav_view"
        app:itemIconTint="@color/colorAccent"
        android:layout_gravity="start"
        app:menu="@menu/activity_home_drawer">>
    </android.support.design.widget.NavigationView>

</android.support.v4.widget.DrawerLayout>
```



HomeFragment.java | HomeActivity.java | activity_home.xml | MainfeedListAdapter.java | fragment_home.xml

```
HomeActivity  onCreate()
            }
        });

        DrawerLayout drawer = (DrawerLayout) findViewById(R.id.drawer_layout);
        ActionBarDrawerToggle toggle = new ActionBarDrawerToggle(
                this, drawer, toolbar, "Open navigation drawer", "Close navigation drawer");
        drawer.setDrawerListener(toggle);
        toggle.syncState();
```

HomeActivity.java

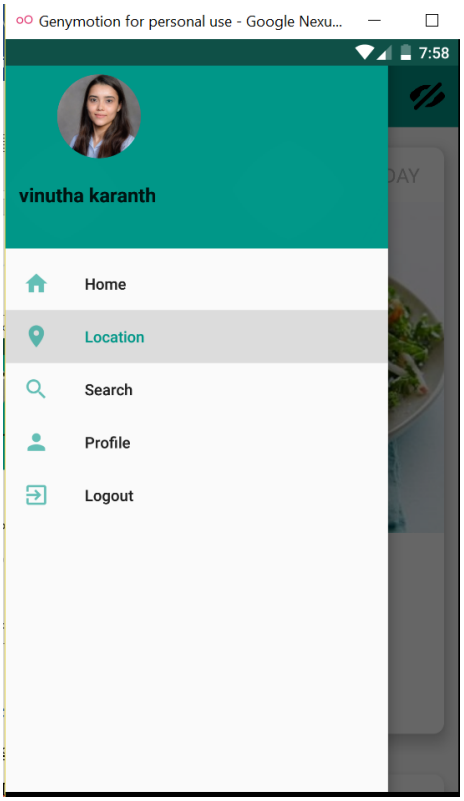
```
HomeActivity  onNavigationItemSelected()
    public boolean onNavigationItemSelected(MenuItem item) {
        // Handle navigation view item clicks here.
        int id = item.getItemId();
        if (id == R.id.nav_home) {
            intent = new Intent(HomeActivity.this, HomeActivity.class);
            startActivity(intent);

        } else if (id == R.id.nav_location) {
            intent = new Intent(HomeActivity.this, MapsActivity.class);
            startActivity(intent);

        } else if (id == R.id.nav_search) {
            intent = new Intent(HomeActivity.this, SearchActivity.class);
            startActivity(intent);

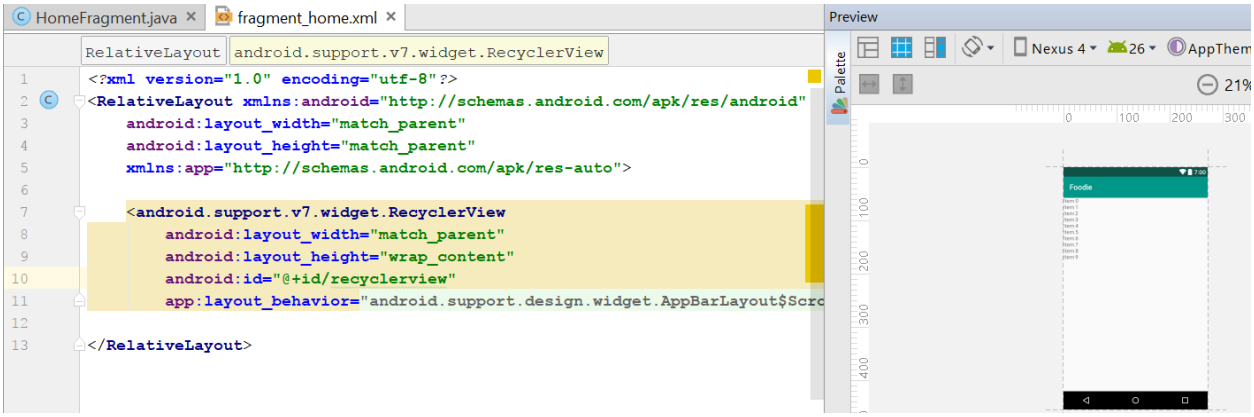
        } else if (id == R.id.nav_profile) {
            intent = new Intent(HomeActivity.this, ProfileActivity.class);
            startActivity(intent);

        } else if (id == R.id.nav_logout) {
            Log.d(TAG, "onClick: attempting to sign out.");
            mAuth.signOut();
            finish();
        }
        DrawerLayout drawer = (DrawerLayout) findViewById(R.id.drawer_layout);
        drawer.closeDrawer(GravityCompat.START);
        return true;
    }
```



3. Recycler View

Recycler View is used in Home Fragment, MainFeedListAdapter file.



HomeFragment.java × fragment_home.xml ×

HomeFragment onCreateView()

```
52      @Override
53      public View onCreateView(LayoutInflater inflater, @Nullable ViewGroup container, @Nullable Bundle savedInstanceState) {
54          View view = inflater.inflate(R.layout.fragment_home, container, false);
55          mRecyclerView = (RecyclerView) view.findViewById(R.id.recyclerview);
56          mFollowing = new ArrayList<>();
57          mPhotos = new ArrayList<>();
```

HomeFragment.java × fragment_home.xml ×

HomeFragment displayPhotos()

```
141     private void displayPhotos(){
142         mPaginatedPhotos = new ArrayList<>();
143         if(mPhotos != null){
144             try{
145                 Collections.sort(mPhotos, (Comparator) (o1, o2) → {
148                         return o2.getDate_created().compareTo(o1.getDate_created());
149                 });
151                 int iterations = mPhotos.size();
152
153                 if(iterations > 10){
154                     iterations = 10;
155                 }
156                 mResults = 10;
157                 for(int i = 0; i < iterations; i++){
158                     mPaginatedPhotos.add(mPhotos.get(i));
159                 }
160                 mAdapter = new MainfeedListAdapter(getActivity(), mPaginatedPhotos);
161                 mRecyclerView.setAdapter(mAdapter);
162                 mRecyclerView.setNestedScrollingEnabled(false);
163                 mRecyclerView.setHasFixedSize(true);
164
165                 LinearLayoutManager mLayoutManager = new LinearLayoutManager(getContext());
166                 mRecyclerView.setLayoutManager(mLayoutManager);
167
168                 //Animations
169                 AlphaInAnimationAdapter alphaAdapter = new AlphaInAnimationAdapter(mAdapter);
170                 ScaleInAnimationAdapter scaleAdapter = new ScaleInAnimationAdapter(alphaAdapter);
171                 scaleAdapter.setDuration(1000);
172                 mRecyclerView.setAdapter(scaleAdapter);
```

MainFeedlistAdapter

HomeFragment.java × MainfeedListAdapter.java × fragment_home.xml ×

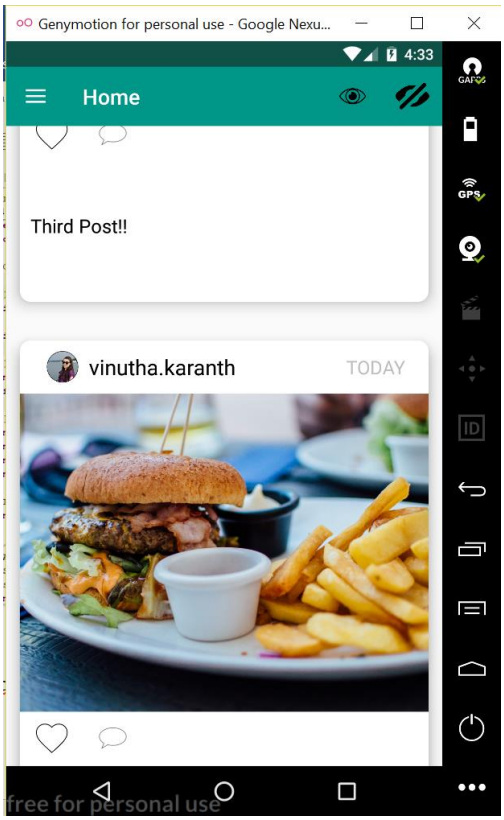
MainfeedListAdapter MyViewHolder

```
43
44  public class MainfeedListAdapter extends RecyclerView.Adapter<MainfeedListAdapter.MyViewHolder> {
45
46      private static final String TAG = "MainfeedListAdapter";
47      OnLoadMoreItemsListener mOnLoadMoreItemsListener;
48      private Context mContext;
49      private DatabaseReference mReference;
50      private String currentUsername = "";
51      private List<Photo> mListPhoto;
```

HomeFragment.java × MainfeedListAdapter.java × fragment_home.xml ×

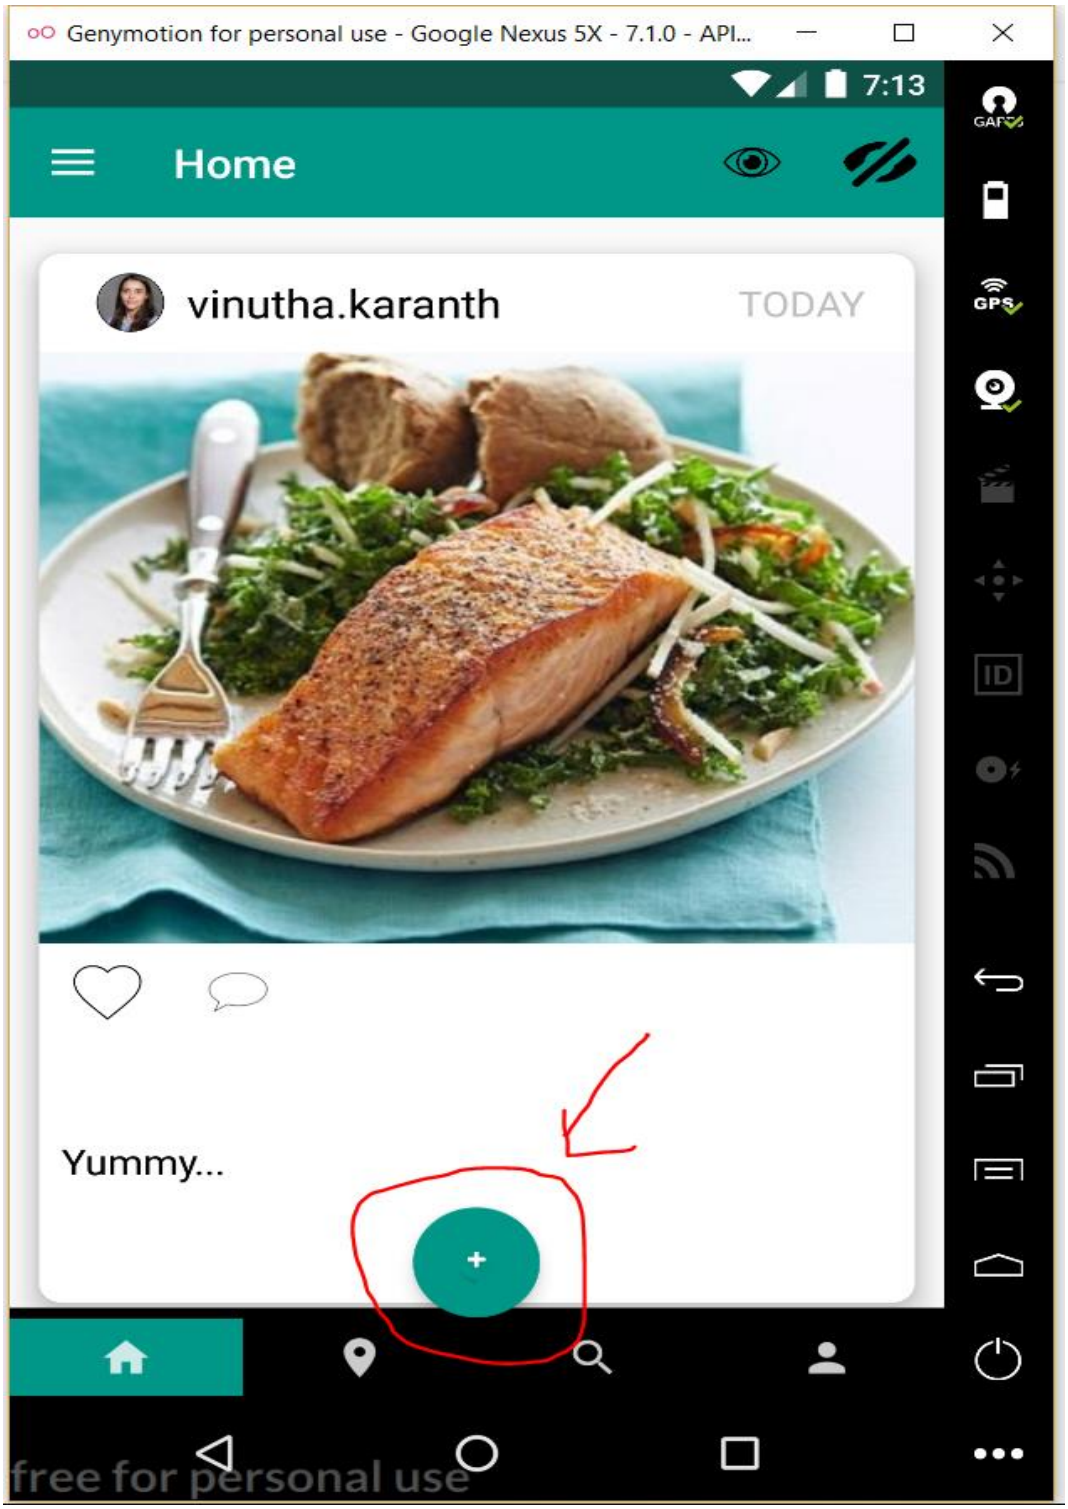
MainfeedListAdapter

```
438     static public class MyViewHolder extends RecyclerView.ViewHolder {
439         CircleImageView mprofileImage;
440         String likesString;
441         TextView username, timeDetla, caption, likes, comments;
442         ImageView image;
443         ImageView heartRed, heartWhite, comment;
444
445         UserAccountSettings settings = new UserAccountSettings();
446         User user = new User();
447         StringBuilder users;
448         boolean likeByCurrentUser;
449         Heart heart;
450         GestureDetector detector;
pter        Photo photo;
452
453         public MyViewHolder(View itemView) {
454             super(itemView);
455
456             username = (TextView) itemView.findViewById(R.id.username);
457             image = (ImageView) itemView.findViewById(R.id.post_image);
458             heartRed = (ImageView) itemView.findViewById(R.id.image_heart_red);
```

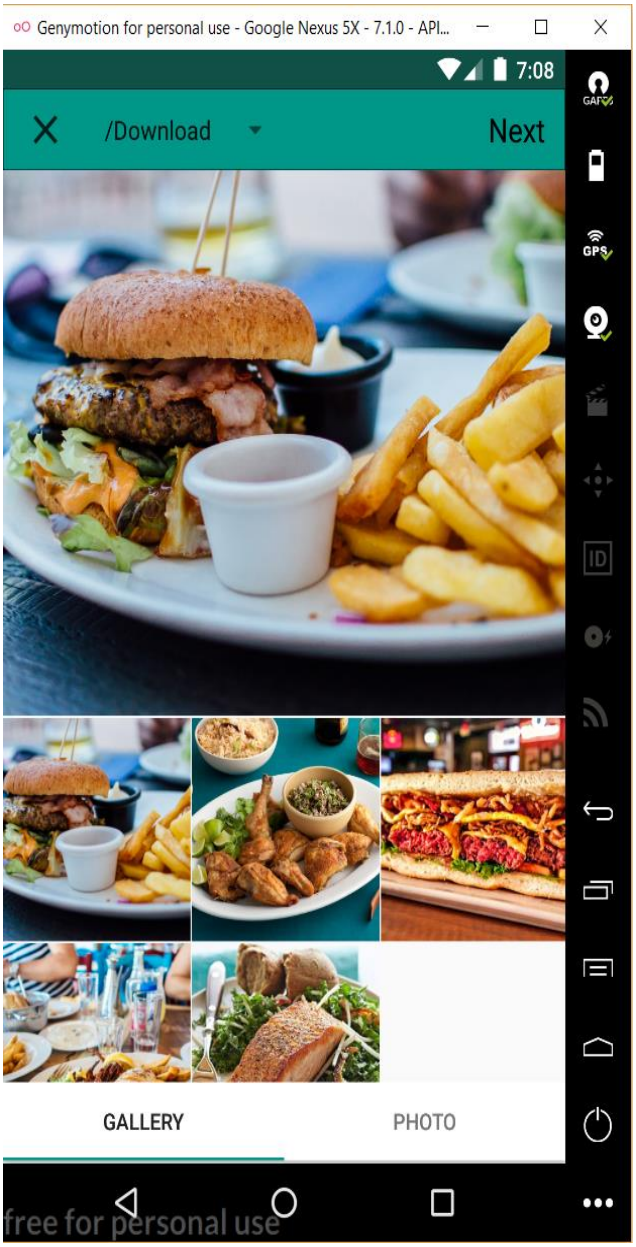


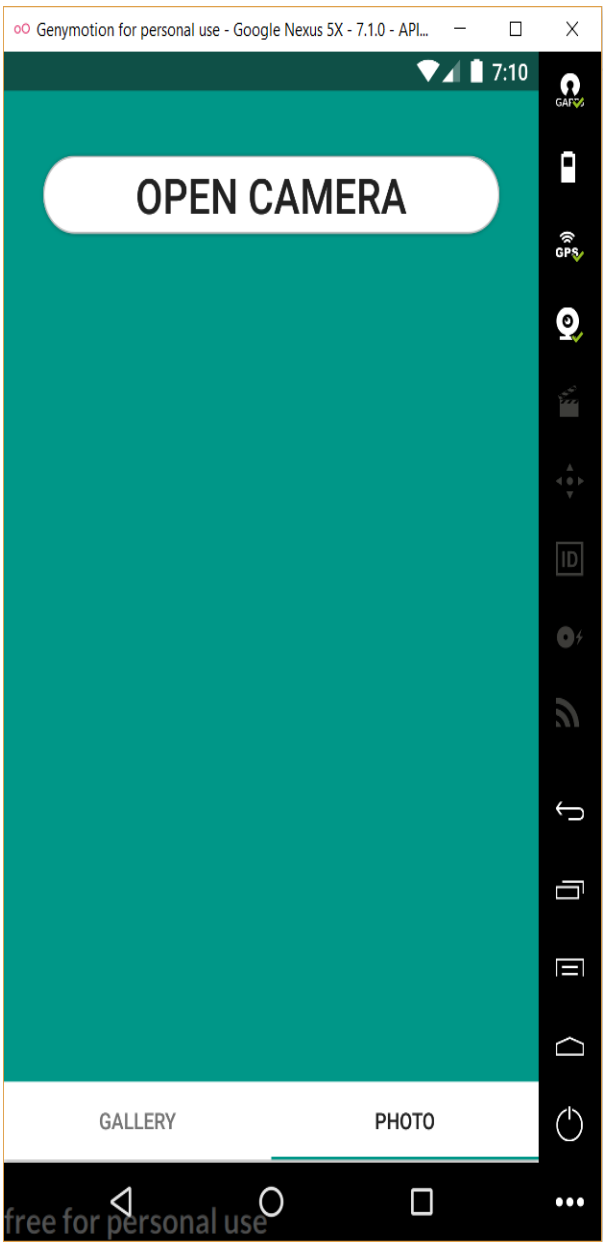
4. View Pager

View Pager is used we click green share floating button highlighted below:



This View Pager has two parts “Gallery” and “Photo” as show below:





Code is shown on next page

ShareActivity.java contains this View Pager:

ShareActivity.java ×

ShareActivity

```
1  package com.connect.foodies.foodies.share;
2
3  import ...
28
29 public class ShareActivity extends AppCompatActivity {
30     private static final String TAG = "ShareActivity";
31
32     //constants
33     private static final int ACTIVITY_NUM = 2;
34     private static final int VERIFY_PERMISSIONS_REQUEST = 1;
35
36     private ViewPager mViewPager;
37     private TextView mTextView;
38     private TextView mTextView3;
39     private Context mContext = ShareActivity.this;
40
41     @Override
42     protected void onCreate(@Nullable Bundle savedInstanceState) {
43         super.onCreate(savedInstanceState);
44         setContentView(R.layout.activity_share);
45         Log.d(TAG, "onCreate: started.");
46
47         mTextView = (TextView)  findViewById(R.id.textView);
48         mTextView3 = (TextView) findViewById(R.id.textView3);
49         if (checkPermissionsArray(Permissions.PERMISSIONS)) {
50             setupViewPager();
51         } else {
52             verifyPermissions(Permissions.PERMISSIONS);
53             mTextView.setText("Checking For Permissions...");
54             mTextView3.setText("Once Permissions Granted. Please Go Back and then Share");
55         }
56
57     }
58
```

```
/**
 * setup viewpager for manager the tabs
 */
private void setupViewPager() {
    SectionsPagerAdapter adapter = new SectionsPagerAdapter(getSupportFragmentManager());
    adapter.addFragment(new GalleryFragment());
    adapter.addFragment(new PhotoFragment());

    mViewPager = (ViewPager) findViewById(R.id.viewpager_container);
    mViewPager.setAdapter(adapter);
    mViewPager.setPageTransformer(true, new RotateUpTransformer());

    TabLayout tabLayout = (TabLayout) findViewById(R.id.tabsBottom);
    tabLayout.setupWithViewPager(mViewPager);

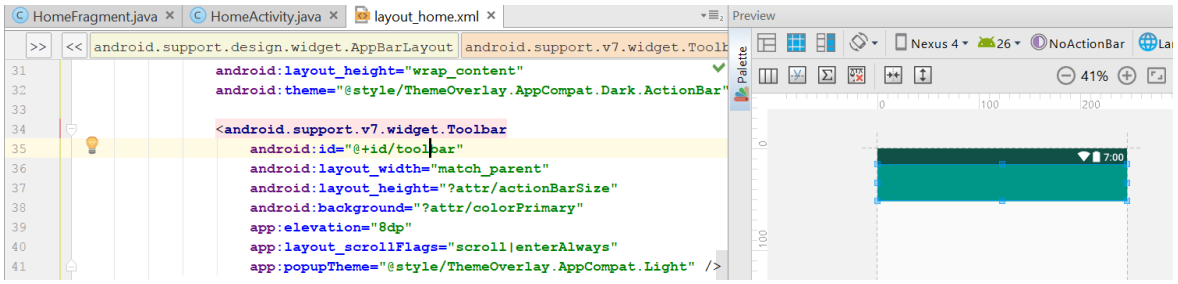
    tabLayout.getTabAt(0).setText("GALLERY");
    tabLayout.getTabAt(1).setText("PHOTO");

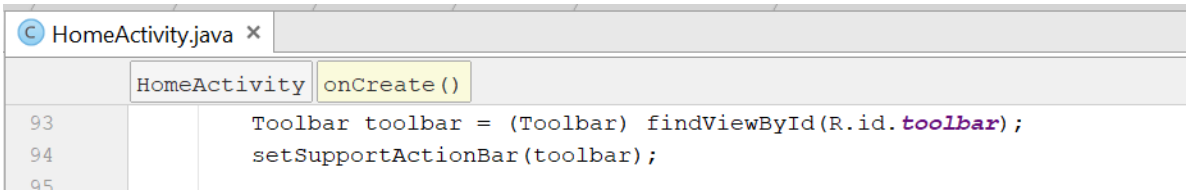
}
```

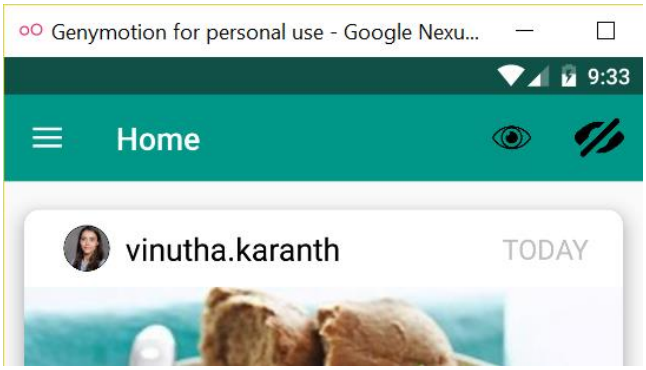
Gallery and Photo Fragments are explained in 9. Media Section.

5. Toolbar, Menus, Floating Action Button, and Coordinator Layout

A. Tools







B. Menus

HomeFragment.java | HomeActivity.java | home.xml | layout_home.xml | Preview

menu > item

```
<?xml version="1.0" encoding="utf-8"?>
<menu xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto">

    <item
        android:id="@+id/action_unhide"
        android:icon="@drawable/ic_unhide_toolbar"
        android:title="Hide"
        app:showAsAction="always" />
    <item
        android:id="@+id/action_hide"
        android:icon="@drawable/ic_hide_bottomtoolbar"
        android:title="Hide"
        app:showAsAction="always" />
</menu>
```

ment.java | HomeActivity.java | home.xml | layout_home.xml | MainfeedListAdapter.java

HomeActivity > onCreateOptionsMenu()

```
@Override
public boolean onCreateOptionsMenu(Menu menu) {
    // Inflate the menu; this adds items to the action bar if it is present.
    getMenuInflater().inflate(R.menu.home, menu);
    return true;
}
```

ment.java | HomeActivity.java | home.xml | layout_home.xml | Ma

HomeActivity > onOptionsItemSelected()

```
public boolean onOptionsItemSelected(MenuItem item) {
    int id = item.getItemId();
    //noinspection SimplifiableIfStatement
    if (id == R.id.action_hide) {
        bottomNavigationViewEx.setVisibility(View.GONE);
        fab.setVisibility(View.GONE);
        return true;
    }
    else if (id == R.id.action_unhide)
    {
        bottomNavigationViewEx.setVisibility(View.VISIBLE);
        fab.setVisibility(View.VISIBLE);
        return true;
    }
    return super.onOptionsItemSelected(item);
}
```

C. Floating action can be done in 3 activities – Home, profile and search

app_bar_home.xml

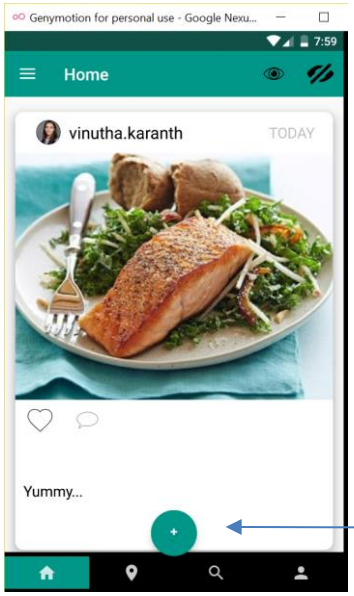
```
<< RelativeLayout  android.support.design.widget.FloatingActionButton

    <android.support.design.widget.FloatingActionButton
        android:id="@+id/fab"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_alignParentBottom="true"
        android:layout_centerHorizontal="true"
        android:layout_gravity="bottom|center"
        android:layout_marginBottom="45dp"
        android:src="@drawable/floating"
        android:transitionName="testAnimation"/>
```

HomeActivity.java | SearchActivity.java | ProfileFragment.java

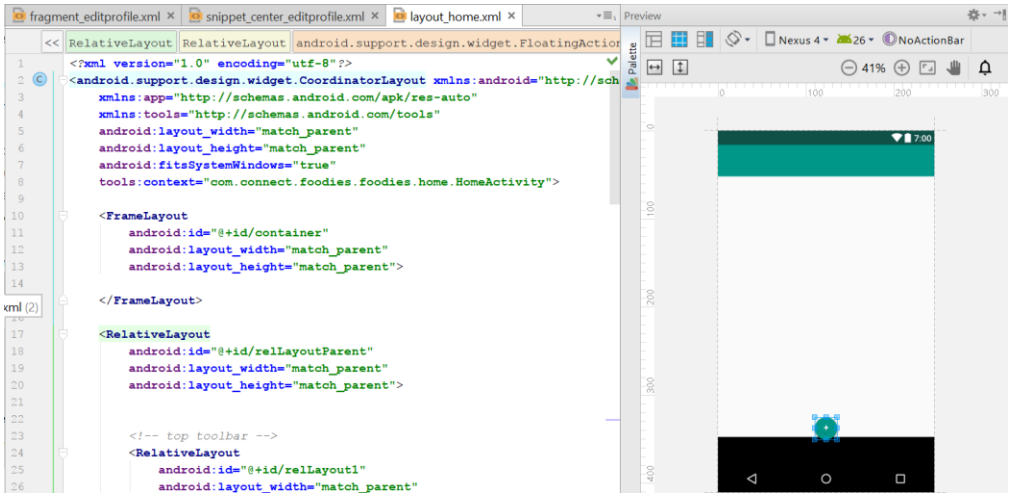
```
HomeActivity  onCreate()

this.fab = (FloatingActionButton) findViewById(R.id.fab);
fab.setOnClickListener(new View.OnClickListener() {
    @Override
    public void onClick(View view) {
        Intent intent = new Intent(mContext, ShareActivity.class);
        if (Build.VERSION.SDK_INT >= Build.VERSION_CODES.LOLLIPOP) {
            ActivityOptionsCompat options = ActivityOptionsCompat.makeSceneTransitionAnimation(HomeActivity.this, view, "testAnimation");
            mContext.startActivity(intent, options.toBundle());
        } else {
            startActivity(intent);
        }
    }
});
```



Floating Action Button

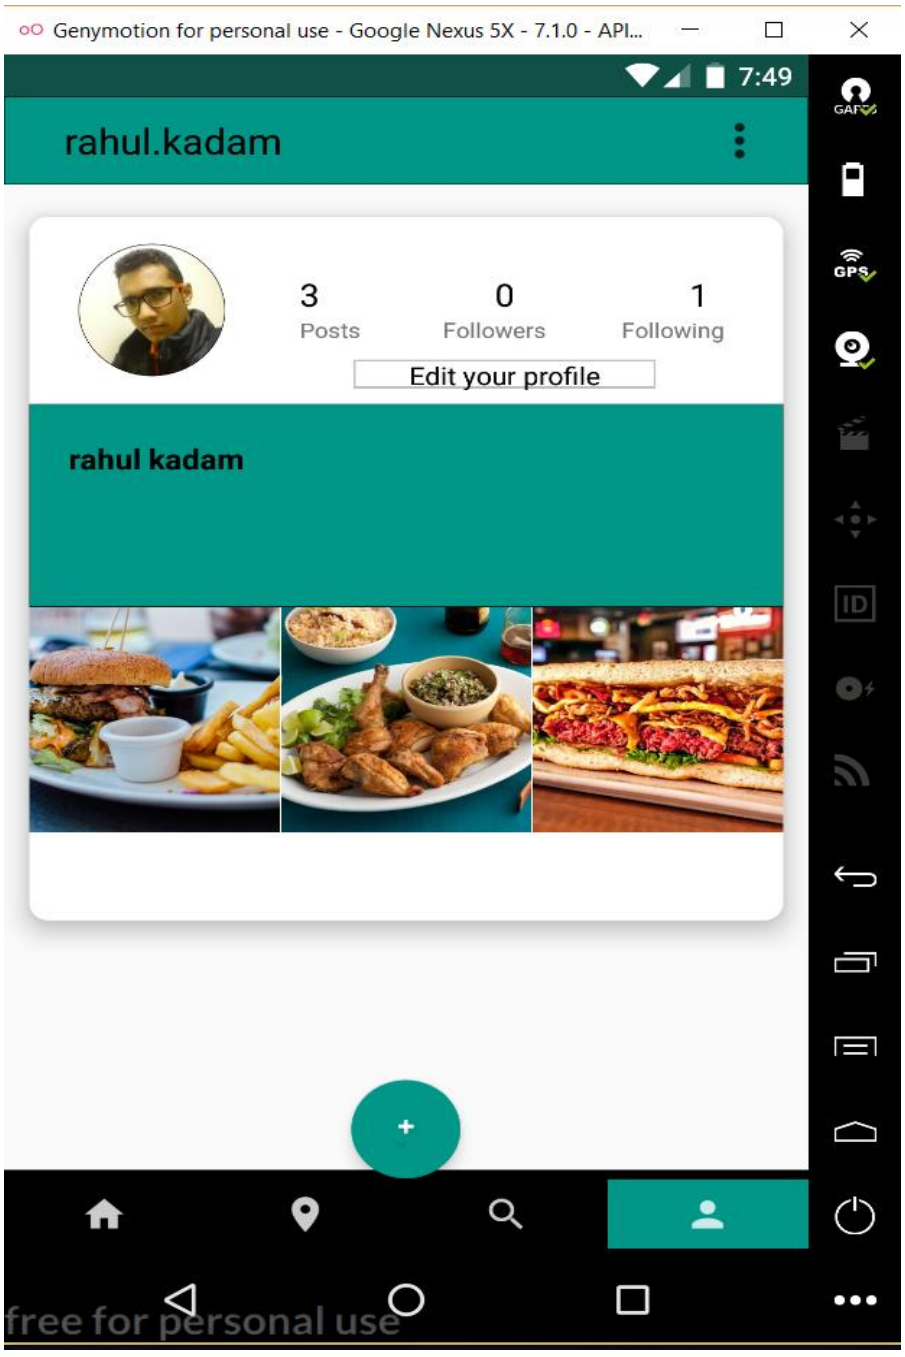
D. Coordinator layout is used in activity_accountsettings, activity_profile, activity_share, activity_bar_home, fragment_editprofile and layout_home. Floating action button and tool bar works perfectly without any disruption.



6. Multiple Fragments and Activities

One of way of using Fragments and Activities is for User Profile feature:

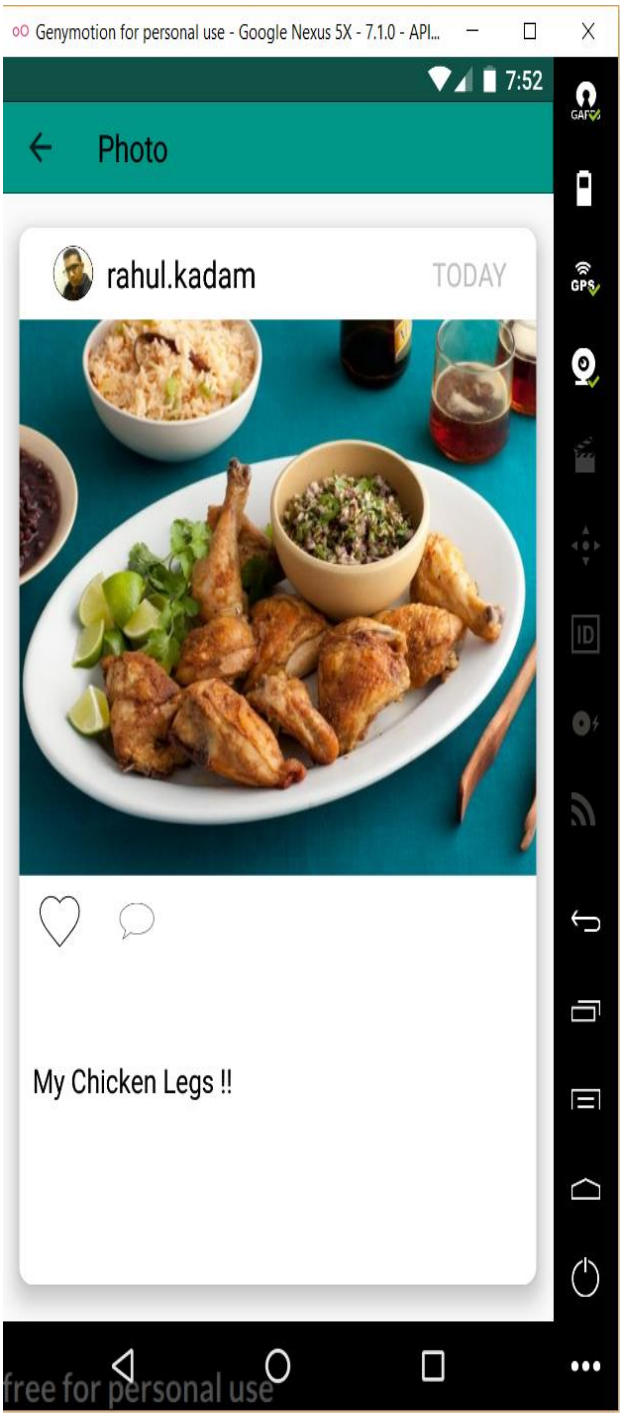
ProfileActivity.java first loads ProfileFragment.java



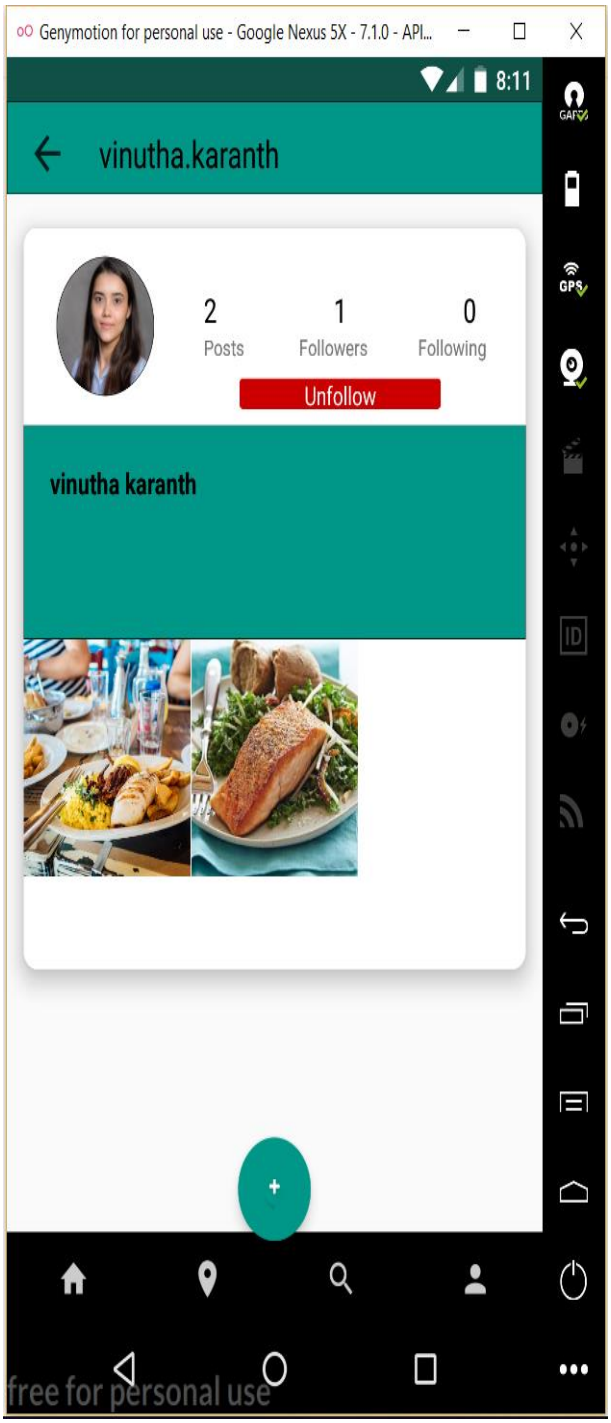
ProfileActivity.java acts as base activity and 3 fragments:

1. ProfileFragment.java (previous page)

2. ViewPostFragment.java



3.ViewProfileFragment.java



Code: ProfileActivity.java

ProfileActivity.java | ProfileFragment.java | ViewPostFragment.java | ViewProfileFragment.java

```
ProfileActivity
1  package com.connect.foodies.foodies.profile;
2
3  import ...
21
22 public class ProfileActivity extends AppCompatActivity implements
23         ProfileFragment.OnGridImageSelectedListener ,
24         ViewPostFragment.OnCommentThreadSelectedListener,
25         ViewProfileFragment.OnGridImageSelectedListener {
26
27     private static final String TAG = "ProfileActivity";
28     private static final int ACTIVITY_NUM = 3;
29     private static final int NUM_GRID_COLUMNS = 3;
30
31     private Context mContext = ProfileActivity.this;
32
```

Code: ProfileFragment.java

ProfileActivity.java | ProfileFragment.java | ViewPostFragment.java | ViewProfileFragment.java

```
ProfileFragment
1  package com.connect.foodies.foodies.profile;
2
3  import ...
54
55 public class ProfileFragment extends Fragment {
56
57     private static final String TAG = "ProfileFragment";
58
59     public interface OnGridImageSelectedListener {
60         void onGridImageSelected(Photo photo, int activityNumber);
61     }
62     OnGridImageSelectedListener mOnGridImageSelectedListener;
```

Code: ViewPostFragment.java

ProfileActivity.java | ProfileFragment.java | ViewPostFragment.java | ViewProfileFragment.java

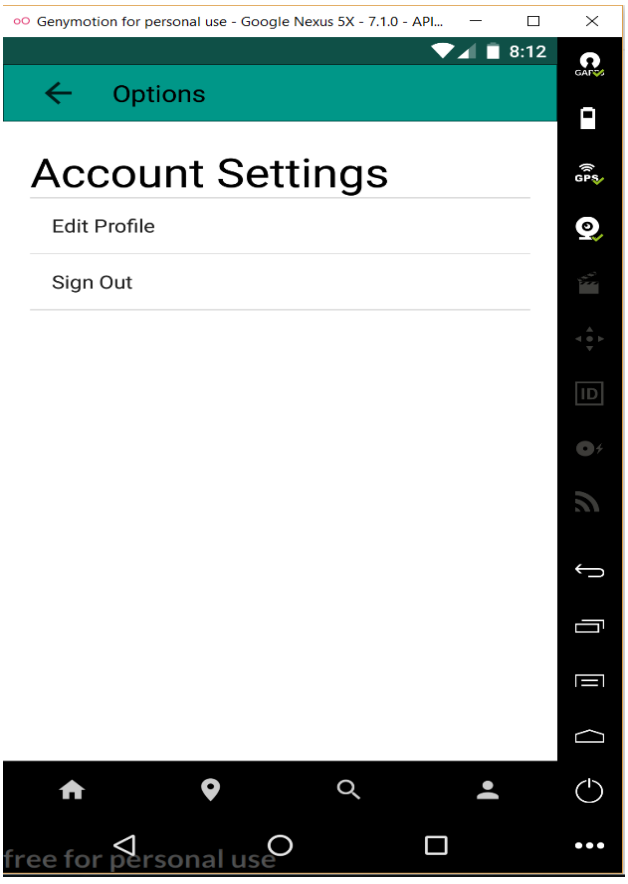
```
ViewPostFragment
1  package com.connect.foodies.foodies.share;
2
3
4  import ...
52
53 public class ViewPostFragment extends Fragment {
54     private static final String TAG = "ViewPostFragment";
55
56
57     public interface OnCommentThreadSelectedListener{
58         void onCommentThreadSelectedListener(Photo photo);
59     }
60     OnCommentThreadSelectedListener mOnCommentThreadSelectedListener;
```

Code: ViewProfileFragment.java

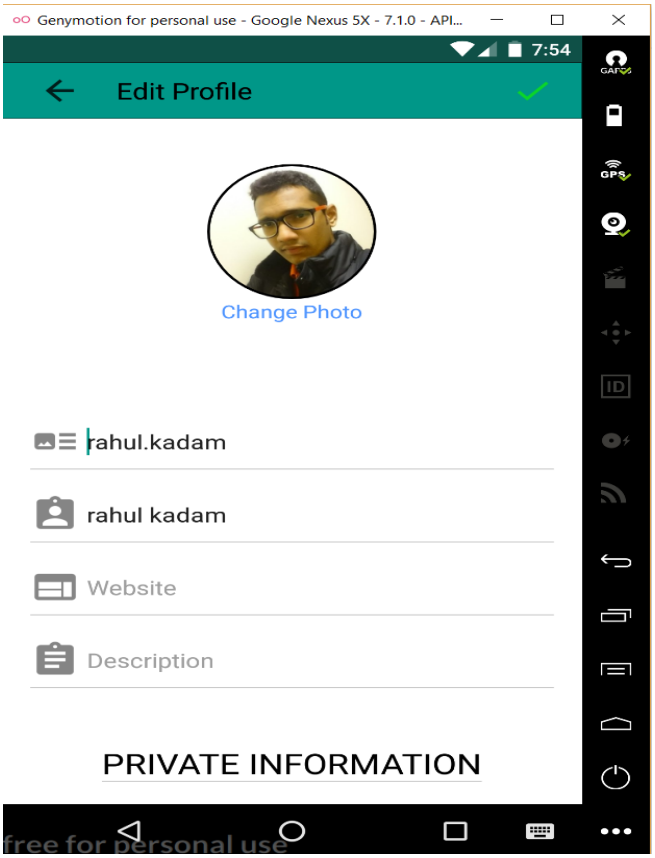
```
ProfileActivity.java × | ProfileFragment.java × | ViewPostFragment.java × | ViewProfileFragment.java ×
ViewProfileFragment
1   package com.connect.foodies.foodies.profile;
2
3   import ...
53
54
55  public class ViewProfileFragment extends Fragment {
56
57      private static final String TAG = "ProfileFragment";
58
59
60      public interface OnGridImageSelectedListener{
61          void onGridImageSelected(Photo photo, int activityNumber);
62      }
63      OnGridImageSelectedListener mOnGridImageSelectedListener;
64
```

AccountSettingsActivity.java acts as base activity for: EditProfileFragement.java and SignOutFragment.java

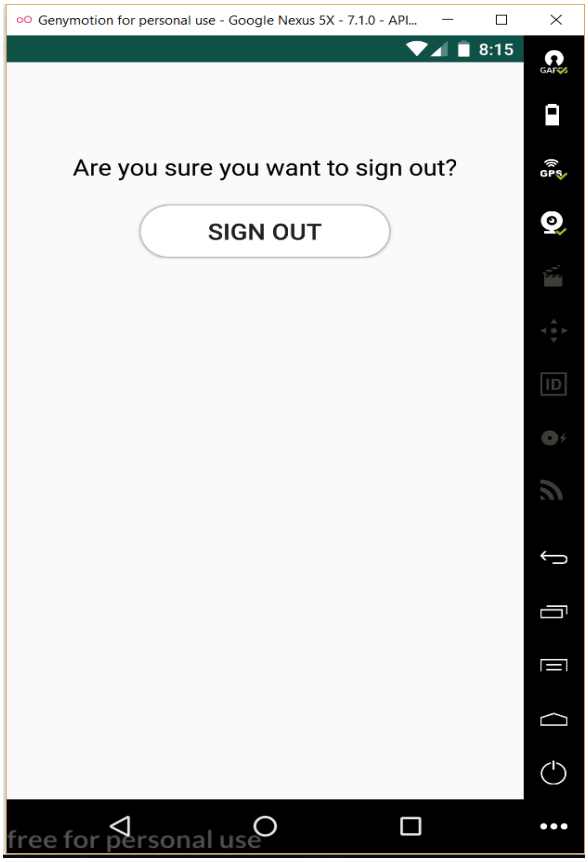
AccountSettingsActivity.java:



EditProfileFragment.java



SignOutFragment.java



Code: AccountSettingsActivity.java

AccountSettingsActivity.java | EditProfileFragment.java | SignOutFragment.java

AccountSettingsActivity | setupFragments()

```
1   package com.connect.foodies.foodies.profile;
2
3   import ...
27
28  public class AccountSettingsActivity extends AppCompatActivity {
29
30      private static final String TAG = "AccountSettingsActivity";
31      private static final int ACTIVITY_NUM = 3;
32
33      private Context mContext;
34      public SectionsStatePagerAdapter pagerAdapter;
35      private ViewPager mViewPager;
36      private RelativeLayout mRelativeLayout;
37
```

Code: EditProfileFragment.java

AccountSettingsActivity.java × EditProfileFragment.java × SignOutFragment.java ×

EditProfileFragment

```
1  package com.connect.foodies.foodies.profile;
2
3  import ...
40
41 public class EditProfileFragment extends Fragment implements
42         ConfirmPasswordDialog.OnConfirmPasswordListener{
43
44
45     @Override
46     public void onConfirmPassword(String password) {
47         Log.d(TAG, "onConfirmPassword: got the password: " + password);
48
49         // Get auth credentials from the user for re-authentication. The example below shows
50         // email and password credentials but there are multiple possible providers,
51         // such as GoogleAuthProvider or FacebookAuthProvider.
52         AuthCredential credential = EmailAuthProvider
53                 .getCredential(mAuth.getCurrentUser().getEmail(), password);
```

Code: SignOutFragment.java

AccountSettingsActivity.java × EditProfileFragment.java × SignOutFragment.java ×

```
1  package com.connect.foodies.foodies.profile;
2
3  import ...
20
21 public class SignOutFragment extends Fragment {
22
23     private static final String TAG = "SignOutFragment";
24
25     //firebase
26     private FirebaseAuth mAuth;
27     private FirebaseAuth.AuthStateListener mAuthListener;
28
29     private ProgressBar mProgressBar;
30     private TextView tvSignout, tvSigningOut;
31
```

There are other fragments used in this project as well, such as Gallery and Photo Fragments are explained in 9. Media Section.

Animations used:

Slide as Gravity Left when clicking on Comments and when clicking on Post

```
public void onCommentThreadSelected(Photo photo, String callingActivity) {
    Log.d(TAG, "onCommentThreadSelected: selected a coemment thread");

    ViewCommentsFragment fragment = new ViewCommentsFragment();
    Bundle args = new Bundle();
    args.putParcelable("PHOTO", photo);
    args.putString("Home Activity", "Home Activity");
    fragment.setArguments(args);
    fragment.setEnterTransition(new Slide(Gravity.LEFT));
    FragmentTransaction transaction = getSupportFragmentManager().beginTransaction();
    transaction.replace(R.id.container, fragment);
    transaction.addToBackStack("View Comments");
    transaction.commit();

}
```

Shared element Activity transition:

When Clicking on Floating Button Share Activity gets called.

```
<android.support.design.widget.FloatingActionButton
    android:id="@+id/fab"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_alignParentBottom="true"
    android:layout_centerHorizontal="true"
    android:layout_gravity="bottom|center"
    android:layout_marginBottom="45dp"
    android:src="@drawable/floating"
    android:transitionName="testAnimation" />
```

```
this.fab = (FloatingActionButton) findViewById(R.id.fab);
fab.setOnClickListener((view) → {
    Intent intent = new Intent(mContext, ShareActivity.class);
    if (Build.VERSION.SDK_INT >= Build.VERSION_CODES.LOLLIPOP) {
        ActivityOptionsCompat options = ActivityOptionsCompat.makeSceneTransitionAnimation(HomeActivity.this, view,
                "testAnimation");
        mContext.startActivity(intent, options.toBundle());
    } else {
        startActivity(intent);
    }
});
```

7. User/App State

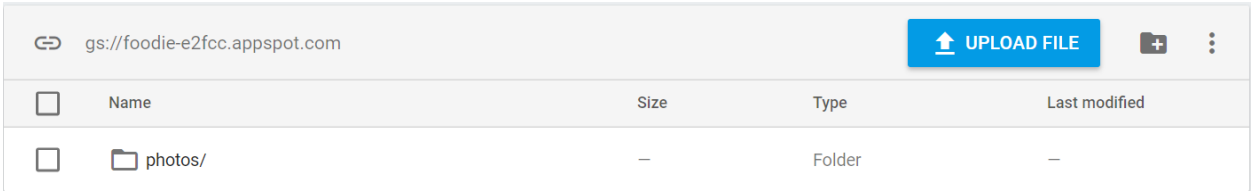
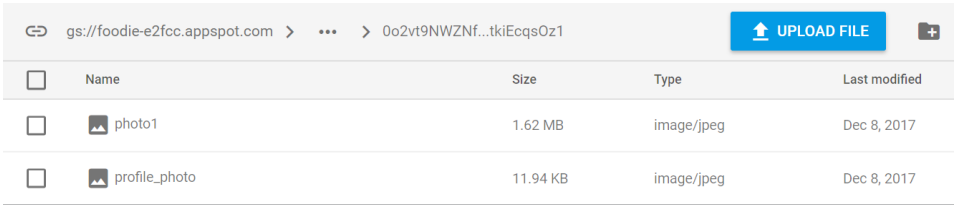
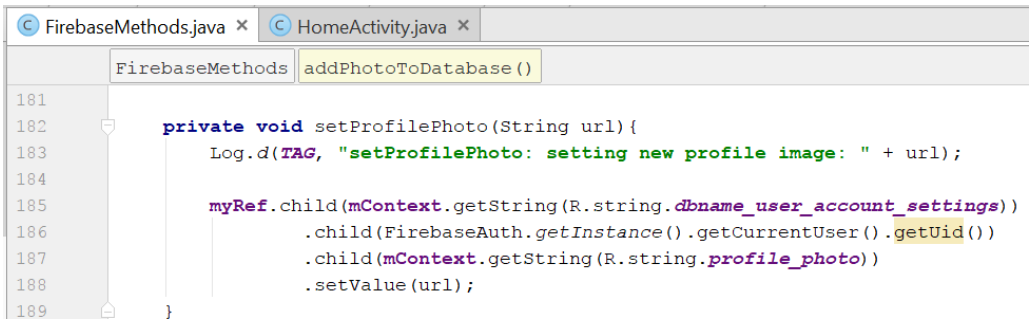
Storage

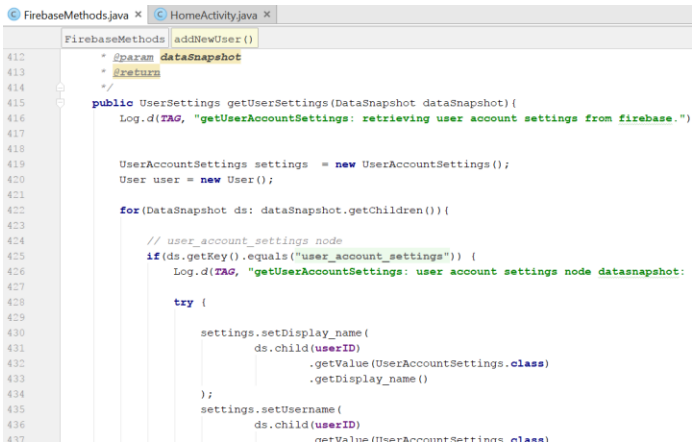




In the Java Code:

FirebaseMethods.java is the main Database file where all the database get and set activities are done. All the other activity or Fragment files calls the methods or function in the FirebaseMethods.java file by passing required arguments.





Database is used in almost all the activities and fragments.

Example HomeActivity:

2. FirebaseMessagingService.java – File used for push Notifications.

FirebaseMessagingService.java

```
package com.connect.foodies.foodies.utils;
import ...
public class FirebaseMessagingService extends com.google.firebase.messaging.FirebaseMessagingService {
    private static final String TAG = "FirebaseMessagingServic";
    public FirebaseMessagingService() {
    }
    @Override
    public void onMessageReceived(RemoteMessage remoteMessage) {
        String title = remoteMessage.getNotification().getTitle();
        String message = remoteMessage.getNotification().getBody();
        Log.d(TAG, "onMessageReceived: Message Received: \n" +
                "Title: " + title + "\n" +
                "Message: " + message);

        sendNotification(title, message);
    }
    @Override
    public void onDeletedMessages() {
    }
    private void sendNotification(String title, String messageBody) {
        Intent intent = new Intent(this, HomeActivity.class);
        intent.addFlags(Intent.FLAG_ACTIVITY_CLEAR_TOP);
        PendingIntent pendingIntent = PendingIntent.getActivity(this, 0 /* Request code */, intent,
                PendingIntent.FLAG_ONE_SHOT);
        Uri defaultSoundUri = RingtoneManager.getDefaultUri(RingtoneManager.TYPE_NOTIFICATION);
        NotificationCompat.Builder notificationBuilder = new NotificationCompat.Builder(this)
                .setSmallIcon(R.mipmap.ic_launcher)
                .setContentTitle(title)
                .setContentText(messageBody)
                .setAutoCancel(true)
                .setSound(defaultSoundUri)
                .setContentIntent(pendingIntent);
        NotificationManager notificationManager =
                (NotificationManager) getSystemService(Context.NOTIFICATION_SERVICE);
        notificationManager.notify(0 /* ID of notification */, notificationBuilder.build());
    }
}
```

16. Misc.

16.1 Shortcuts

AnimationFactory.java | ViewPostFragment.java | AndroidManifest.xml

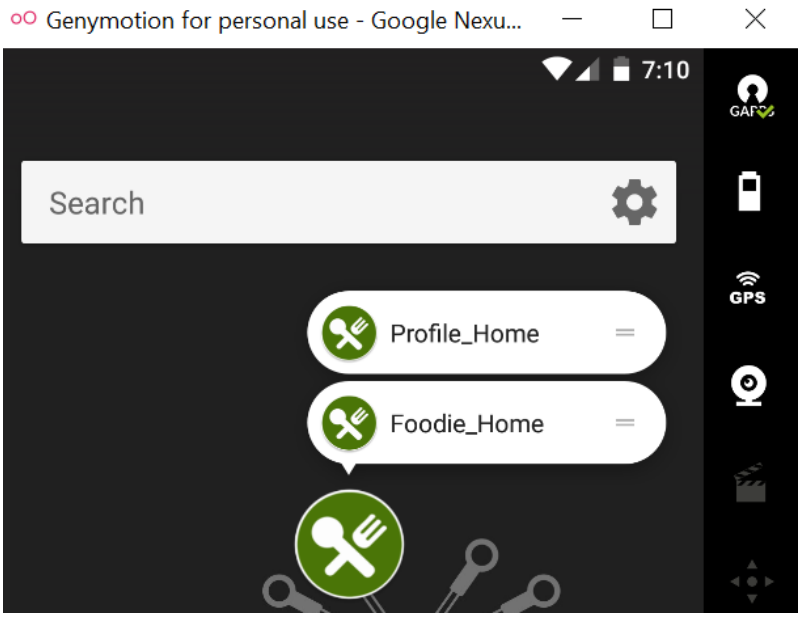
manifest > application > activity > meta-data

```
46          <meta-data
47              android:name="android.app.shortcuts"
48              android:resource="@xml/shortcuts" />
49      </activity>
```

AnimationFactory.java | ViewPostFragment.java | AndroidManifest.xml | shortcuts.xml

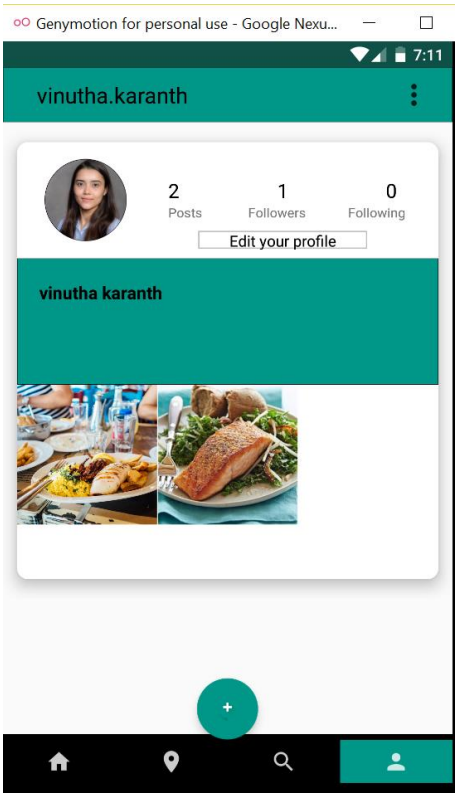
```
<?xml version="1.0" encoding="utf-8"?>
<shortcuts xmlns:android="http://schemas.android.com/apk/res/android">
<shortcut
    android:shortcutId="Foodie_Home"
    android:enabled="true"
    android:icon="@mipmap/ic_launcher"
    android:shortcutShortLabel="Foodie_Home"
    android:shortcutLongLabel="Foodie_Home">
    <intent
        android:action="android.intent.action.VIEW"
        android:targetPackage="com.connect.foodies.foodies"
        android:targetClass="com.connect.foodies.foodies.home.HomeActivity" ></intent>
    <categories android:name="android.shortcut.conversation"/>
</shortcut>
    <shortcut
        android:shortcutId="Profile_Home"
        android:enabled="true"
        android:icon="@mipmap/ic_launcher"
        android:shortcutShortLabel="Profile_Home"
        android:shortcutLongLabel="Profile_Home">
        <intent
            android:action="android.intent.action.VIEW"
            android:targetPackage="com.connect.foodies.foodies"
            android:targetClass="com.connect.foodies.foodies.profile.ProfileActivity"></intent>
        <categories android:name="android.shortcut.conversation"/>
    </shortcut>
</shortcuts>
```

Shortcut display on long pressing on app icon

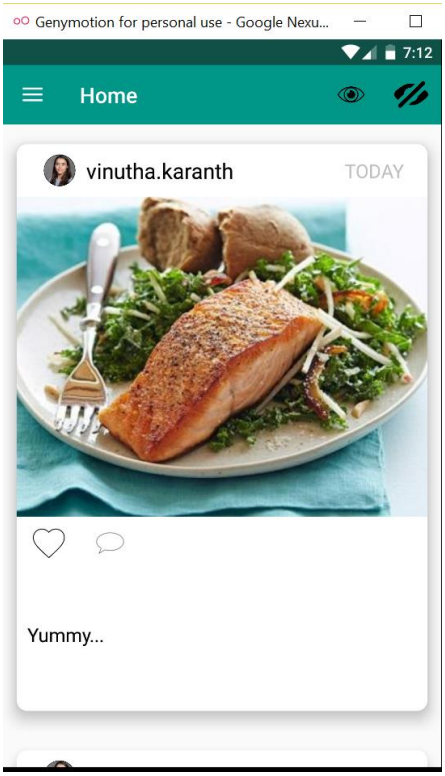


If User is Logged in:

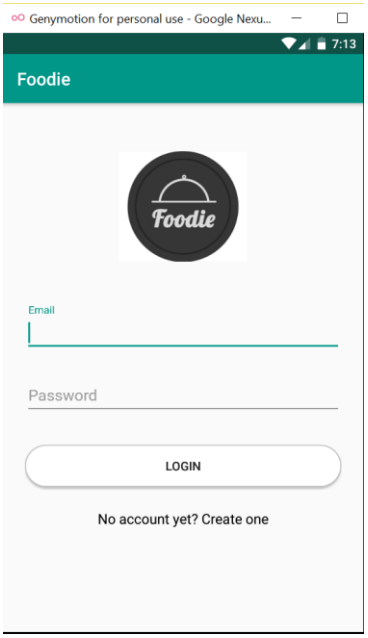
On clicking Profile_Home:



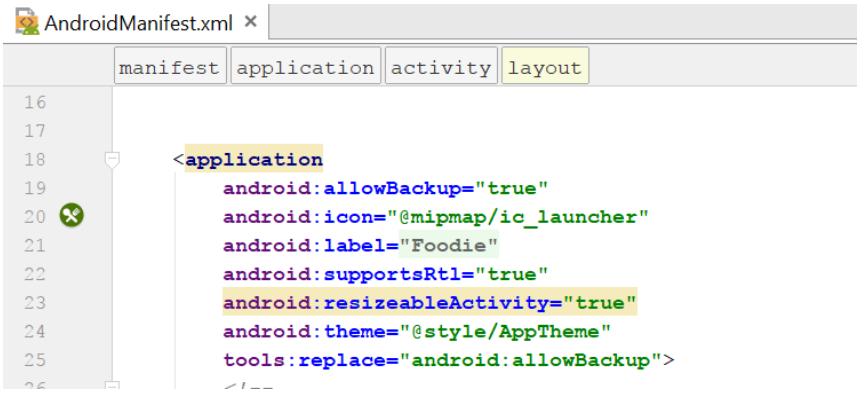
On clicking Foodie_Home:



When User is Logged Out both short cut takes user to Login Screen, App will not have any data backstacked:



16.2 Multi-Window



```
<activity
    android:name=".home.HomeActivity"
    android:label="Home"
    android:theme="@style/AppTheme.NoActionBar">
    <layout android:defaultHeight="500dp"
        android:defaultWidth="600dp"
        android:gravity="top|end"
        android:minHeight="450dp"
        android:minWidth="300dp" />

</activity>
```

MultiWindow Demo in App (Both the apps works simultaneously):
